

Business Continuity Planning

Business Continuity Planning at Sedona Technologies is a suite of comprehensive services that help you identify, develop, and maintain the processes and plans necessary for protecting your organization and resuming your critical operations following a business disruption.

Sedona Technologies has the knowledge, expertise, and experience to assist you in addressing all aspects of your continuity planning requirements.

Business Continuity Planning services:

Program Development & Support

Establishes your overall continuity planning program, including strategies, objectives, awareness, and the education your staff needs for development, deployment, and on-going management. **Services: Implementation and Education.*

Analysis & Mitigation

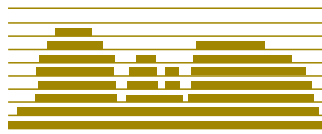

Identifies and quantifies internal/external risk to your organization, as well as the business impact you may experience due to a disruption to critical facilities, business processes, technologies, and/or resources. Analysis and Mitigation enables you to evaluate and prioritize risk mitigation strategies and establish recovery objectives for your business processes, systems, and data. **Services: Risk Analysis, Business Impact Analysis.*

Plan Development

Establishes and documents the processes and procedures you need for immediate response to a disruption, leadership during the crisis, resumption of time-sensitive business processes, and the recovery of technology systems, data, and infrastructure. Plan development ensures the safety and welfare of your employees, viability of your enterprise, and proper communication to your stakeholders, service providers, and the media. **Services: Emergency Response, Crisis Management, Business Resumption, Disaster Recovery.*

Plan Validation & Maintenance

Verifies your plans are effective and executable. Establishes the processes and tools to ensure your plans remain current and relevant to business requirements. **Services: Plan Auditing/Exercises, Testing/Maintenance.*

Benefits of Continuity Planning
